LuxSE launches Transition Financing Profile to connect sustainable debt financing with issuer transition strategies

During a Ring the Bell for Climate ceremony, the Luxembourg Stock Exchange unveiled the Transition Financing Profile, a new tool designed to bring greater transparency into how issuers are financing their climate transition through sustainable debt securities.

Yesterday, the Luxembourg Stock Exchange (LuxSE) launched the Transition Financing Profile, a new solution that helps investors understand how issuers are using sustainable debt financing as part of their broader transition journey. The launch took place during a special Ring the Bell for Climate ceremony, organised as part of the World Federation of Exchanges' (WFE) global campaign.

Leveraging data from the LGX DataHub, which covers more than 27,000 sustainable bonds, the Transition Financing Profile provides a consolidated view of an issuer's transition strategy and its financing via sustainable debt instruments.

Covering green, social, sustainability, transition and sustainability-linked bonds, the tailored report enables investors to move beyond individual instruments to understand an issuer's broader

sustainable financing activity and its alignment with transition objectives.

Depending on the issuer and available disclosures, the report includes instrument-by-instrument analysis covering issuance volumes, use of proceeds, as well as reported allocation and impact data, KPIs, and case studies.

Expanding LuxSE’s transition finance offering

As the need to finance the decarbonisation of high-emitting industries become increasingly urgent, investors need to understand how companies finance their transition. Investors are therefore looking beyond individual bond documentation to understand how sustainable debt financing fits within an issuer’s broader transition journey. Relevant information is often dispersed across bond frameworks, external reviews, allocation and impact reports, and corporate disclosures. The Transition Financing Profile brings these sources together in a single report.

Recognising the growing demand for tools that support transition finance analysis, LuxSE launched the Transition Finance Gateway in 2025, providing greater transparency on where LuxSE’s non-financial corporate issuers stand in their climate transition journey. The launch of the Transition Financing Profile marks the next step in the expansion of LuxSE’s transition finance offering, complementing the Gateway with deeper insights into how issuers finance their transition.

“Understanding an issuer’s transition journey requires more than analysing individual bond issuances. Investors need a holistic view of how sustainable debt financing supports broader transition ambitions. By bringing together an issuer’s sustainable bonds activities with its transition corporate disclosures in a structured and comparable format, the Transition Financing Profile provides greater transparency into how issuers are financing and delivering on their transition plans, » said Laetitia Hamon, Chief Operating Officer and Member of the Executive Committee at LuxSE.

Turning sustainable data into transition insights

Investors can use the Transition Financing Profile for a range of purposes, including portfolio screening, issuer due diligence, peer benchmarking, and client and stakeholder engagement. The report also supports comparisons across issuers and sectors by bringing together sustainable debt issuance data, allocation practices and transition-related disclosures in a single view.

The Transition Financing Profile further strengthens LuxSE’s transition finance ecosystem, supporting market participants with greater transparency and deeper insights into climate transition financing activities.
