

Vodafone begins construction of pan-European logistics hub in Luxembourg

Vodafone begins construction of pan-European logistics hub in Luxembourg

Vodafone today marked a key milestone in the construction of its new pan-European logistics hub in Luxembourg, with the installation of the first structural column. The 36,000 sqm facility, scheduled to become operational in early 2026, will be run by Vodafone Procure & Connect and will centrally manage all of Vodafone's European stock, simplifying Vodafone's European warehouse footprint.

By centralising logistics activities and integrating digital tools, the initiative will streamline Vodafone's supplier collaboration, enhance demand forecasting, and optimise delivery timelines, driving greater efficiency across Vodafone's European markets. The new hub is designed to be one of Europe's most sustainable logistics centres. The hub is targeted to achieve BREEAM outstanding certification, reflecting the company's commitment to sustainability in supply chain operations.

Vodafone has appointed CFL logistics, a subsidiary of CFL multimodal, as its logistics partner for warehousing operations. The company will primarily provide customised warehouse management and inventory tracking systems. The facility is being developed in close collaboration with MG Real Estate, ensuring the integration of innovative and sustainable building practices.

Attending the ceremonial event today, **Minister of the Economy, SME, Energy and Tourism, Lex Delles**, commented on the significance of this project: *"Vodafone's decision to establish its pan-European logistics hub in Luxembourg reinforces our position as a sustainable and innovative logistics platform at the heart of Europe. This demonstrates Luxembourg's ability to attract leading international investments and drive the green transformation of our infrastructure. It also underlines the confidence global companies place in our country's economic dynamism and stability."*

Ninian Wilson, CEO, Vodafone Procure & Connect, added: *"Setting the first column into the ground is a powerful symbol of progress, not just in the physical construction of the hub, but in the way we are reshaping logistics for the future. Standardisation, efficiency, and sustainability are at the heart of this initiative, ensuring a smarter and more agile supply chain for Vodafone and its customers across Europe."*

Ignace De Paepe, President, MG Real Estate, stated: *“This development marks more than just the construction of a new logistics hub, it represents a shared vision between MG Real Estate and Vodafone to set new benchmarks in sustainability and innovation. We are proud to mark this milestone with the placement of the first MG column and look forward to seeing this future-proof hub take shape in the months ahead.”*
