

The Luxembourg Blockchain Week 2025

special announcement

The Luxembourg Blockchain Week 2025 special announcement

The Luxembourg blockchain ecosystem reaches a pivotal milestone with the announcement of a strategic partnership between Digital Minds and The Dots Luxembourg to co-organize the fifth edition of Luxembourg Blockchain Week, beginning 24 November 2025.

A Premier Industry Gathering Strengthens Its Position

Over four successful editions, Luxembourg Blockchain Week has established itself as the premier annual gathering for Luxembourg's and Europe's distributed ledger technology (DLT) ecosystem. This essential event has evolved into a cornerstone platform where blockchain professionals, technology enthusiasts, and industry pioneers converge to share expertise and drive innovation forward.

The event's comprehensive format encompasses high-level conferences featuring renowned international speakers, strategic side events fostering meaningful networking opportunities, and specialized thematic sessions designed to facilitate knowledge transfer and collaborative solution development. The entire ecosystem participates actively, contributing diverse expertise and sector-specific insights to create an unparalleled learning environment.

A Distinctive Approach: Independence and Excellence

Luxembourg Blockchain Week has cultivated a unique philosophy since its inception: a rigorously independent, non-commercial approach that prioritizes meaningful dialogue, experience sharing, and strategic networking over promotional activities. This distinctive vision manifests through:

- Open and transparent dialogue between all ecosystem stakeholders
- Rigorous selection of world-class international speakers
- High-value content focused on innovation and strategic foresight
- An environment conducive to lasting partnerships and fruitful collaborations

The event's strength lies in its commitment to serving DLT practitioners, creating an environment where practical expertise and concrete use cases take precedence over marketing presentations. This approach has fostered genuine collaboration and knowledge exchange among ecosystem

participants (The LHoFT, Infrachain, LIST, SnT, Lëtzblock, Luxembourg House of Web 3, Offchain), contributing to Luxembourg's growing reputation as a blockchain innovation hub.

A Strategic Partnership for Enhanced Impact and Sustainability

The alliance between Digital Minds and The Dots Luxembourg represents a natural evolution born from complementary strengths and shared vision. This collaboration aims to amplify the event's impact while ensuring its long-term sustainability and continued international reach within the Luxembourg ecosystem.

Digital Minds, leveraging expertise gained by its founder from four successful editions, will maintain strategic oversight of the event, including:

- Content development and program coordination
- Speaker selection and international outreach
- Ecosystem animation and institutional partner mobilization

The Dots Luxembourg, renowned for organizing high-profile technology events, will contribute:

- Operational excellence and professional event management
- Innovative and strategic vision for the development of the event
- Comprehensive logistics expertise with an experienced team
- Enhanced communication and international outreach, leveraging its strong tech community and network of thought leaders actively shaping the future of blockchain and emerging technologies.

Through its media and community platforms, The Dots will also strengthen the event's visibility and mobilize a broad community of technology leaders, entrepreneurs, corporates and investors across multiple regions, further positioning Luxembourg as an attractive and credible blockchain hub on the international stage.

Continuity Through the Support of Infrachain

For several years, Infrachain, through its members and as the initiator of the project, has played a key role in establishing Luxembourg as a leading blockchain hub. By passing the torch to The Dots and Digital Minds, with Emilie Allaert, who originally launched the initiative within Infrachain five years ago, Infrachain ensures the long-term continuity of this flagship event for the entire ecosystem, reaching far beyond the traditional blockchain enthusiast community. This transition reflects the collective will to maintain and grow a platform that serves the broader innovation economy while preserving its community roots.

Leadership Statement

« Each year, Luxembourg Blockchain Week reveals fresh perspectives and increasingly concrete, impactful use cases. I could not conceive of this event not taking place this year – the evolution and maturation of our ecosystem depends directly on it. I am deeply excited about this promising collaboration with The Dots and look forward to working alongside our entire dynamic community to create a program that is ambitious, rich in insights, and accessible to the greatest number of participants, » declares **Emilie Allaert**, founder of Digital Minds.

« Beyond organizing a high-level event, our ambition is to strengthen Luxembourg's position as a trusted and active player in the international blockchain ecosystem. By combining forces, we will not only reinforce the communication around the event but also mobilize our broad community of technology leaders to showcase Luxembourg's unique assets and openness. The objective is clear: foster cross-border collaborations and ensure that Luxembourg is fully recognized as a central and forward-looking blockchain hub in Europe and beyond. » states **Kamel Amroune**, CEO of The Dots.

“After nearly ten years, Infrachain has helped bring blockchain and crypto into the mainstream, even here in Luxembourg. With Luxembourg Blockchain Week growing into a major international event, it was the right time to hand over to a professional duo. Emilie and Kamel have the vision and experience to take it to the next level.” **Laurent Kratz**, Founder and Vice President of Infrachain

“Infrachain was born from a vision: developing blockchain adoption in Luxembourg and across Europe. Nearly ten years later, that vision has grown into a collective movement, driven by the conviction that Europe must shape its own path in the decentralized digital economy. Blockchain and crypto-assets are no longer emerging trends; they are becoming pillars of future financial, industrial, and public infrastructure. Infrachain has contributed to this evolution, establishing Luxembourg as a serious player on the global blockchain stage.

As part of this journey, the Luxembourg Blockchain Week has grown into a flagship international event. I am proud to entrust its future to Emilie and Kamel, two passionate leaders whose energy, expertise, and European outlook will take it to new heights.” **Fabrice Croiseaux**, Founder and President of Infrachain.
