

OCA joins LU-CIX, confirming its involvement with the Luxembourg's cybersecurity ecosystem

OCA (Office Courtage Assurance), a Luxembourgbased insurance brokerage firm with over 12 years of experience, is proud to announce its brand-new membership at LU-CIX ASBL, the leading non-profit organization promoting Luxembourg's Internet resilience and sovereignty.

Through this membership, OCA reaffirms its commitment to supporting the local tech ecosystem and to providing innovative, risk-based insurance solutions tailored to the challenges of today's digital economy.

"Joining LU-CIX is a natural step for OCA. We share the same values of trust, resilience and forward-thinking. As cyber risks continue to rise in complexity and impact, we believe that insurance must become more intelligent, more strategic, and more connected to the operational reality of digital businesses. That's exactly where OCA positions itself."— Alain Courson, Founder of OCA

As a recognized expert in **cyber insurance**, OCA supports tech-driven companies through a unique combination of proximity, expertise and high-performing partners. The firm has successfully handled recent incidents involving **ransomware attacks** in the fiduciary and industrial sectors, as well as fraud cases in the field of custom **software development**.

Beyond incident response, OCA works **proactively with cloud service providers and digital players**, anticipating vulnerabilities such as critical update failures or business interruption, and

ensuring coverage that aligns with regulations like NIS2.

From its headquarters in the heart of Luxembourg, OCA acts not only as a broker, but as a strategic ally — helping clients understand, quantify and mitigate risk in a fastchanging technological environment.

With this new affiliation to LU-CIX, OCA looks forward to strengthening its ties with Luxembourg's tech community and co-building a more resilient digital future.

*“We are pleased to give OCA a platform within our community to **raise awareness** about risk management requirements and prevention, aiming to reduce outages, breaches, and other threats. In addition to helping companies prevent such risks, OCA will also support them in becoming eligible for cyber insurance, thereby contributing to the strengthening of network and information system security in the country,”*
