

# WEDOS joins the LU-CIX community

LU-CIX is glad to announce a new Platinum member amongst its community, WEDOS.

WEDOS is a fully European company with its group headquarters in Luxembourg, operating one of the largest global Anycast infrastructures built entirely on self-owned hardware. With development and technical teams spread across the EU, WEDOS delivers high-performance, secure infrastructure solutions for critical digital services.

WEDOS provides services to more than 380,000 customers worldwide, including governments, financial institutions, universities, and major online platforms. The company manages over 415,000 domains through its secure DNS ecosystem and processes billions of daily requests via its protection, reverse proxy, and monitoring platforms. Its infrastructure is entirely operated within the European Union, designed from the ground up to ensure compliance with GDPR, NIS2, DORA, and SOC 2, supporting full data sovereignty and regulatory alignment for critical digital services.

One common goal shared by LU-CIX and WEDOS, making this collaboration even more worthwhile, is the wish to help build a sovereign and secure Europe.

“With WEDOS, we are delighted to welcome another actor in the anti-DDoS space on LU-CIX. In the worsening geopolitical climate, DDoS attacks are a growing risk for every Internet-connected entity. Connecting to an Internet Exchange like LU-CIX is one way to reduce this risk, and contracting commercial anti-DDoS services is another way, that any entity should seriously

consider. Thus, having more choice in such services is a welcome addition to the Luxembourg ICT ecosystem!" stated Michel LANNERS, CIO of LU-CIX GIE.

"Joining LU-CIX is an important step in our mission to provide trusted and sovereign digital infrastructure within Europe. We're proud to be part of the Luxembourg ICT ecosystem and look forward to contributing our expertise in DDoS protection and DNS." said Merle Kukys, Manager Gérant, WEDOS Sàrl.
