

TechSense Summit “Future-Ready or Not”: Rethinking the IT model

Luxembourg, November 6, 2025 — PwC Luxembourg will host the final TechSense Summit of the year, under the theme “Future-Ready or Not” on November 13th, 2025. The conference will bring together CIOs, IT leaders and innovation experts to discuss how IT can evolve into a strategic pillar of business transformation.

Anticipating tomorrow: building resilient and agile IT models

As digital transformation accelerates and organizations face mounting pressure to innovate responsibly, the IT function stands at a decisive turning point. Between the rise of low-code platforms, increasing demands for digital sovereignty, and the growing need for agility, technology leaders are redefining what it means to be Future-Ready.

More than ever, IT must evolve beyond its traditional support role to become a true strategic partner: one capable of anticipating what lies ahead, building organizational resilience and agility, and adapting to both disruption and evolving business needs.

The “2030 IT Radar” and IT as a pillar in business transformation

This new edition of TechSense Summit will explore the major trends that will shape the next five years through the lens of the “2030 IT Radar”. Discussions will highlight how IT can become a true business partner, how companies can move beyond legacy constraints, and how low-code platforms are redefining the way we innovate.

A day dedicated to reflection and exchange, this summit aims to rethink IT not just as a support function but as a core driver of strategic evolution and business impact.

Leading voices and forward-looking conversations

The plenary conference will bring together a diverse line-up of experts, including Bernard Benhamou (Institute of Digital Sovereignty), Valentin Plugaru (LuxProvide), and Jordi Cabot (LIST), among others. Throughout the afternoon, attendees will also hear from renowned leaders representing PwC Luxembourg, NSI Luxembourg, Deep, Luxembourg AI Factory, OVHcloud, Proximus NXT Luxembourg, Microsoft and NTT Data, as they explore how organizations can adapt to technological disruption and leverage innovation to build resilient ecosystems.

As in previous editions, a VIP session (reserved for invited guests) will take place earlier in the day, offering a unique opportunity for networking and collaborative workshops with CIOs and sponsors.

Whether you are a CIO, an IT leader or a professional eager to understand how technology is reshaping business, the TechSense Summit offers a unique space for inspiration and knowledge-sharing. To learn more about the program and speakers, [please visit the event page](#).

TechSense Summit is supported by PwC Luxembourg, DEEP, Luxembourg AI Factory, NSI Luxembourg & IBM, NTT Data, Proximus NXT Luxembourg & Microsoft and OVHcloud.
